International School on Foraminifera

6th Course

Urbino, 4-18 June, 2013

First Circular

Course Description
The 6th Course on Foraminifera is designed to provide an overview of the Taxonomy, Ecology, Biodiversity and Geological History of Benthic and Planktonic Foraminifera. This intensive course is intended for students interested in Micropalaeontology, Palaeoceanography, Palaeoecology, and Climate History. The aim is to provide a primer on the study of foraminifera and examples of how foraminifera can be used as paleoenvironmental and palaeoceanographical proxies. We review the current classification schemes of the foraminifera, discuss Ecology and Life History, review their usefulness for Biostratigraphical applications, and use case studies to investigate the geological history of the group with lab sessions.

Course Structure
Three distinct courses are planned: Larger Benthic Foraminiferal Course (5-9 June), Smaller Benthic Foraminiferal Course (10-14 June) and Planktonic Foraminiferal Course (15-18 June).

Teaching Format
The course consists of lectures and practical classes covering the taxonomy, distribution, and ecology and paleoecology of foraminifera. Microscope lab sessions provide the opportunity for participants to learn the foraminiferal genera and species, and view Cretaceous to Neogene foraminferal assemblages from Petroleum Exploration areas and ODP sites as well as Quaternary and modern assemblages. Course materials include numerous reprints of classic papers, distributed on digital format.

Courses Outline

4 June Tuesday   Icebreaker Party

Larger Benthic Foraminifera

Day 1   (5 June Wednesday)
Definition, biology and taxonomy of LBF: species concept and classifications
Biostratigraphic frameworks: evolutionary tendencies and fossil associations
Applications of LBF: Ecology and taphonomic signals
Functional morphology of LBF: actuopalaentological approach
Upper Palaeozoic shallow water Fauna: the Fusulinina Suborder
Lab: hydrodynamics of nummulitids

Day 2   (6 June Thursday)
Jurassic to Cretaceous Larger Agglutinated Foraminifera
Lab: Jurassic to Cretaceous Larger Agglutinated Foraminifera
Day 3  (7 June Friday)
- The Cenozoic LBF systematic groups
- Introduction to Palaeogene LBF: biogeography and provinces
- Early evolution in the Paleocene: agglutinated, porcelanaceous and hyaline
- The LBF turnover and the Eocene-Oligocene boundary
- The Eocene biodiversity (I): the genus *Alveolina*
- The Eocene biodiversity (II): the genus *Nummulites*
- Lab: classifications techniques, biometry and thin sections

Day 4  (8 June Saturday)
- The nummulite bank: characterization, ecology and biostratinomy
- The Eocene biodiversity (III): the orthophragminids
- Oligo-Miocene fauna
- Distribution of recent LBF
- Diversity and applications on recent LBF
- Lab: Micro Computed Tomography on recent LBF

Day 5  (9 June Sunday)
- Day off

**Smaller Benthic Foraminifera**

Day 6  (10 June Monday)
- Review of benthic Foraminiferal Suborders
- Morphology and Classification of benthic Foraminifera
- Morphogroups and functional morphology
- Ecology and Distribution of benthic Foraminifera
- Lab: Data bases, Taxonomy of benthic foraminiferal suborders

Day 7  (11 June Tuesday)
- Community Structure, Life History, and Reproduction
- Oceanographic proxies, benthic foraminiferal microhabitats, and productivity/oxygenation
- Benthic foraminifera and water mass properties
- Atlantic and Mediterranean shallow water benthic Foraminifera
- Lab: Modern smaller benthic foraminifera: Foraminiferal genera and assemblages

Day 8  (12 June Wednesday)
- Biostratigraphy and Paleoeconomy of benthic foraminifera
- The ODP record, K/Pg and E/O boundaries
- Lab: A review of late Cretaceous to Paleogene faunas

Day 9  (13 June Thursday)
- Cenozoic Paleoeceanographic events and smaller benthic foraminifera
- Neogene of West Africa, and Gulf of Mexico: The ACEX Arctic Drilling Expedition
- Lab: The Paleogene record; North Sea, Trinidad, Angola, Carpathians, Gubbio
- A review of Jurassic to late Cretaceous faunas, Bering Sea Pleistocene faunas

Day 10  (14 June Friday)
- Morning field excursion
- Afternoon tourist visit
- Social Dinner

**Planktonic Foraminifera**

Day 10  (15 June Saturday)
- Introduction to Planktonic Foraminiferal Classification
- Modern Planktonic Foraminifera
- Taxonomy of modern planktonic foraminifera
- Structure of cytoplasm, Feeding, symbiont and growth
- Reproductive, seasonal, and diurnal cycles depth habitats
Origin of Planktonic Foraminifera
Biogeography of planktonic foraminifera
Faunal Provinces, Climatic Zones and Water Masses
Lab: Recent assemblages - wall structures - morphometric

Day 11  (16 June Sunday)
  Neogene Planktonic Foraminifera
  Miocene and Pliocene Planktonic Foraminifera
  Pleistocene Planktonic Foraminifera
  Biochronology and Zonal schemes
  Lab: Miocene index species - Pliocene-Pleistocene index species

Day 12  (17 June Monday)
  Mesozoic Planktonic Foraminifera
  Biostratigraphy
  Notes on Paleoceanography
  Lab: Upper Jurassic to Maastrichtian

Day 13  (18 June Tuesday)
  Cenozoic Planktonic Foraminifera
  Biostratigraphy
  Notes on Paleoceanography
  Lab: Paleogene index species
  Aperitif

Min number of participants: 10

Final deadline May 11th, 2013

Registration fees
Early registration (application sent and payment before February 9th, 2013)

PhD/MSc Students:
One course £ 290
Two courses £ 450
Full courses £ 570

Academic/Industrial staff:
One course £ 380
Two courses £ 600
Full courses £ 750

Late registration (application and payment sent after February 9th, 2013)

PhD/MSc Students:
One course £ 330
Two courses £ 540
Full courses £ 700

Academic/Industrial staff:
One course £ 430
Two courses £ 710
Full courses £ 860

The fee includes:
• lectures (4-day course)
• lecture notes
• icebreaker party
• refreshments
• aperitif
• excursion (for benthic and planktonic course)
• social dinner (for benthic and planktonic course)
How to make an application
Registration must be done by submitting the application form to fabrizio.frontalini@uniurb.it or by fax to (+39) 0722 304220.

Correspondence and Information:

Dr. Fabrizio Frontalini,
Dipartimento di Scienze della Terra, della Vita e dell'Ambiente (DiSTeVA)
Università degli Studi di Urbino "Carlo Bo"
Campus Scientifico, Località Crocicchia, 61029 Urbino (Italy)
fabrizio.frontalini@uniurb.it
Tel: (+39) 0722 304309, Fax: (+39) 0722 304220, Mobile phone: (+39) 3928457666

Lectures
Prof. Michael A. Kaminski, King Fahd University of Petroleum & Minerals (Saudi Arabia)
Dr. Fabrizio Frontalini, Urbino University (Italy)
Prof. Laia Alegret, University of Zaragoza (Spain)
Dr. Claudia Cetean, Fugro Robertson Ltd (UK)
Prof. Maria Rose Petrizzo, Milano University (Italy)
Prof. Cesare Andrea Papazzoni, University of Modena e Reggio Emilia (Italy)
Prof. Rodolfo Coccioni, Urbino University (Italy)
Prof. Geraint Wyn Hughes, King Fahd University of Petroleum & Minerals (Saudi Arabia)
Prof. Johann Hohenegger, University of Vienna (Austria)
Dr. Antonino Briguglio, University of Vienna (Austria)
Dr. Sev Kender, British Geological Survey (UK)

Requirements
The course is primarily intended for young researchers at the PhD or MSc stages of their careers and industrial staff working with Foraminifera, Meiofauna, Micropalaeontology, Paleoceanography, Paleoecology, Climate History. Applicants will primarily be selected on the basis of the relevance of the course for their current work.

Location
The course will be held in Urbino at the “Collegio Internazionale”. The “Collegio Internazionale” is in the historic center of Urbino.

Accommodation and meal
It is possible for participants to accommodate at the “Collegio Internazionale” (University Hall). Most of the rooms are double and have en-suite bathrooms, only few single rooms are available and will be assigned in enrollment order. The rooms are furnished, clean and comfortable. The cost of the accommodation is € 18 in double and € 25 in single per night including breakfast. The accommodation cost would be paid upon your arrival in cash or by debit/credit card directly to the reception desk of Collegio Internazionale (please visit, http://www.collegiointernazionaleurbino.it/en/1/galleria-immagini.html). Lunch and dinner are free, but meals may be obtained by a rechargeable card (it will provided a personal card for any participant) at the nearby university residential block in the "Mensa del Duca" (1-minute walking from Collegio Internazionale). The cost is either € 10 for a complete meal (first course, second course, side dish, bread, fruit and water) or € 6 for a meal (main course, two side dishes, bread, fruit and water).

The second circular with detailed information about the course is scheduled to be distributed on early March 2013 and will be sent to people who answered the first one.

We look forward to seeing you in Urbino!

Dr. Fabrizio Frontalini PhD

Mobile phone: (+39) 3928457666
This June, for about two weeks, the streets of Urbino were filled with foram-enthusiasts for obvious reasons… With its 5th installment, the renowned International School on Foraminifera attracted many students and professionals from Africa, Asia, Europe, South America and the USA, eager to learn about these awesome little critters. Students included people various stages in their academic careers (bachelor to post-doc level) as well as industrial micropalaeontologists. Their interests spanned the entire stratigraphic record, from Cretaceous to Recent. Organized by Fabrizio Frontalini of the University of Urbino and Mike Kaminski of the King Fahd University of Petroleum & Minerals, and under the auspices of, and with sponsorship of the Grzybowski Foundation, this course provides a state-of-the-art overview on foraminifera and their use in biostratigraphy, ecology, (paleo)environmental reconstructions, climate studies and modern applications of benthic foraminifers in anthropogenically impacted environments. These topics were presented by Mike and Fabrizio, with the assistance of several guest lecturers: Laia Alegret (University of Zaragoza, Spain), Claudia Cetean (Fugro Robertson Limited) and Maria Rose Petrizzo (University of Milano, Italy).

The picturesque medieval city of Urbino is draped atop a hill, providing stunning panoramic views of the foothill landscape surrounding it. Undoubtedly equally beautiful is the local architecture and art: as a World Heritage Site, Urbino is known for its exceptional legacy of independent Renaissance culture under the patronage of Federico da Montefeltro, the duke of Urbino in the 15th Century. Low cost accommodation for applicants was provided in the modern and luxurious Collegio Internazionale located in the city centre, only a stone’s throw away from the Piazza della Repubblica, which can be considered as the social hub and main "gelato" provider of Urbino. Speaking of food, although the campus had a great cafeteria, many students opted to explore the numerous marvelous restaurants in the city center, as recommended by some more-experienced members. The on-campus accommodation had many benefits: not only did it allow for intense professional networking and fruitful discussions to be continued after-hours, but it was also an ideal way to meet up to go for dinner, amble around town and its surrounding fields, watch the European Football Championship games or explore the infamous local pubs at night.

The course itself consists of two parts, one dealing with benthic and the other with planktic foraminifera. They can be regarded as two separate entities that function independently, but most participants opted to follow both. Each course was constructed in a similar way, with lectures in the morning and microscope sessions in the afternoon. The lectures started off with basic taxonomic and morphological concepts, only to quickly delve into more complex matters, well-illustrated with many case studies taken from the literature and personal experiences of the lecturers. This clever construction of the course made sure that it appealed to both amateurs as well as veterans in the field. The interactive and spontaneous nature of the classes was also reflected in the
fact that students got the opportunity to present personal work, complementing the topic of the day. The microscope sessions were set up as an independent study time, but always ended up being interactive with lots of discussions and cooperation among students and lecturers. Samples from the lecturers’ extensive personal reference collections were available, as were reprints of a plethora of classic papers and books. This allowed for each student to fine-tune their skills or to do their personal work, which ranged from thesis research to industry-based applications.

The much-anticipated fieldtrip, which took place on the second day of the planktic course, was conceived to illustrate the fascinating geology of the Marche-Umbria region. In the morning, the stops included the Jurassic carbonate platforms and the Ammonitico Rosso near the Gola del Furlo, and the Contessa road section including the Bonarelli event (Oceanic Anoxic Event 2; OAE2) and the Paleocene-Eocene Thermal Maximum (PETM). After having lunch in the gorgeous city of Gubbio, the fieldtrip resumed, with the next stop on our itinerary being the Bottaccione gorge. Here, the famous K/Pg boundary described by Alvarez and colleagues prompted a spontaneous photo shoot moment. The last stop of the fieldtrip was the lovely Gorgo a Cerbara section, a proposed GSSP for the Barremian/Aptian boundary including the Selli anoxic event (OAE1a). After this exhausting yet incredibly satisfying day in temperatures soaring to 40°C (so I have been told), it was time to sit back, relax and once again experience the wonders of Italian cooking at the social dinner. Set in a refurbished farm that has been converted to a brewery, we enjoyed our meals whilst “enduring” Mike’s and Rodolfo Coccioni’s epic karaoke rendition of “Volare” and ‘That’s Amore”. What a splendid way to end a wonderful day!

I’m convinced that, at the end of the ten-day course, people new to the field of foraminifera left with a firm grasp on the concepts used in foraminifera-based research, while veterans had the opportunity to refresh, expand or polish their knowledge. But perhaps more importantly, the school has acted as a catalyst in forging new professional bonds and, manifested by the many emotional goodbyes on the final day, lifelong friendships as well, which can only be beneficial for the foram community in the future. ISF…highly recommended!
